

Data Loggers & Wireless Monitors Calibration

Regular recalibration of your wireless environmental monitoring system is essential to maintain accurate and reliable readings, especially when indemnity or accreditation is important to sustain appropriate environmental conditions for your collection.

Novatron provide a full onsite based calibration service, along with repair of minor faults, to both Eltek and Hanwell environmental monitoring systems.

Our engineers are fully trained to complete the work on your premises and to upload any adjustments onto your monitoring system software. This avoids the need to return monitor stations back to the manufacturer, leading to a lengthy downtime.

- **All work undertaken at client premises.**
- **Three point humidity and one point temperature against Novasina salt capsules and reference hygrometer.**
- **Minor repairs and battery replacements optional.**
- **Fully trained engineers with Health & Safety Passport.**
- **Fixed price service visit or contract.**
- **All UK and Ireland regions covered.**

Novatron recommend annual calibration on all monitoring systems. Please contact us today for a fixed price service visit.
