

Novasina Instruments Service and Calibration

Essential Preventative Maintenance and Calibration

- ❖ Regular service and calibration of all measuring instruments is essential to guarantee continued reliability of results, fast readings and certificates of compliance for your own quality system and audits.
- ❖ Novatron recommend 6 monthly service and calibration of all water activity meters which are used daily and annual for those used infrequently. Hand-held hygrometers and other instruments, at least annual calibration.
- ❖ Our team of experienced engineers are fully trained, carry many spares and are able to carry out most repair work at the time of the service.
- ❖ Our data base keeps your service & calibration records allowing us to contact you and book an engineer to visit in good time for when your maintenance is next due.

Traceable Calibration Certificates

- ❖ All calibration is carried out against traceable standards and service reports and certificates are issued accordingly. UKAS calibration is optional in our own accredited laboratory.
- ❖ Traceable standards are used for temperature as well as humidity.
- ❖ Your service and calibration is carried out in accordance with our own ISO 9001 quality system technical procedures.

Safety, Training and Technical Support

- ❖ All Novatron engineers are holders of the ECITB Health & Safety Passport and are fully trained for work with electrical appliances and in factory / public building environments. Risk assessments and method statements are available on request.
- ❖ Service contracts are available and we offer a 3 day call-out service. Please ask our engineers for a quotation.
- ❖ Along with equipment maintenance and service, Novatron provide full technical support, including training, trouble-shooting and training seminars for water activity and humidity technology. See our website for details: www.novatron.co.uk
